```
INTEGRATION GUIDE — Scraper + Tamil Language Support
═══════════════════════════════════════════════

━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━
PART 1 — REAL PRICE SCRAPER (Backend)
━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━

STEP 1 — Install dependencies
  cd backend
  npm install axios cheerio node-cron

STEP 2 — Copy scraper.js into backend/
  (use the scraper.js file from outputs)

STEP 3 — Update backend/server.js
  Add this line at the bottom of server.js, inside the mongoose.connect().then() block:

  require("./scraper");

  This starts the cron job when your server starts.
  It will run immediately on startup + every day at 6:00 AM IST.

STEP 4 — Update Price model (backend/models/Price.js)
  Add these two fields to your Price schema:

  source:   { type: String, default: "user_submitted" },  // "scraped" or "user_submitted"
  minPrice: { type: Number },
  maxPrice: { type: Number },

STEP 5 — Push to GitHub
  git add .
  git commit -m "add live price scraper with daily cron"
  git push

  Render will auto-redeploy. Scraper starts running on the server automatically.

NOTE: Scraped prices have source: "scraped" so you can
      show an "Official Source" badge on market prices page.

━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━
PART 2 — TAMIL LANGUAGE SUPPORT (Frontend)
━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━

STEP 1 — Copy files into your frontend/src folder
  lang.js      → frontend/src/utils/lang.js
```

```
  useLang.js   → frontend/src/hooks/useLang.js

STEP 2 — Update frontend/src/main.jsx
  Replace with the main.jsx from outputs.
  This wraps the whole app with LangProvider.

STEP 3 — Update Sidebar.jsx
  Add the language toggle button from Sidebar_langpatch.jsx
  into your footer section (next to dark mode toggle).

STEP 4 — Update Dashboard.jsx
  Add at top:
    import { useLang } from "../hooks/useLang";
    import { COMMODITY_TAMIL, DISTRICT_TAMIL } from "../utils/lang";

  Add inside component:
    const { t, lang } = useLang();

  Apply all patches from Dashboard_langpatch.jsx

STEP 5 — Update MarketPrices.jsx
  Same imports + apply patches from MarketPrices_langpatch.jsx

STEP 6 — Update AddPrice.jsx
  Same imports + apply patches from AddPrice_langpatch.jsx

STEP 7 — Push to GitHub
  git add .
  git commit -m "add Tamil/English language support"
  git push

═══════════════════════════════════════
HOW THE LANGUAGE TOGGLE WORKS
═══════════════════════════════════════

- User clicks the toggle button in sidebar → switches EN ⇔ தமிழ்
- Language preference saved in localStorage (persists on refresh)
- t("key") returns the correct string for current language
- Commodity and district names use COMMODITY_TAMIL / DISTRICT_TAMIL maps
- API calls always use English values (only display changes)

═══════════════════════════════════════
FILES SUMMARY
═══════════════════════════════════════

```

```
Backend (copy to backend/):
  scraper.js                → backend/scraper.js

Frontend (copy to frontend/src/):
  lang.js                   → frontend/src/utils/lang.js
  useLang.js                → frontend/src/hooks/useLang.js
  main.jsx                  → frontend/src/main.jsx

Patch guides (apply manually):
  Sidebar_langpatch.jsx     → apply to Sidebar.jsx
  Dashboard_langpatch.jsx   → apply to Dashboard.jsx
  MarketPrices_langpatch.jsx → apply to MarketPrices.jsx
  AddPrice_langpatch.jsx    → apply to AddPrice.jsx

```
